

Nampak Plastics

Not many IT companies can provide a managed service for both iSeries and Windows

Managed Hosting

- IaaS
- Dedicated Hosting
- High Availability

Nampak
packaging excellence

Managed hosting & IaaS from Blue Chip

Nampak Plastics, with its head office in Newport Pagnell, is the UK's leading manufacturer of HDPE plastic bottles for the dairy industry, producing over 2 billion bottles each year through a network of nine manufacturing plants, seven of which are in-plant sites based on their customer's dairy premises. Forming such a vital part of the UK milk supply chain, Nampak required a reliable IT solutions provider.

► An immediate need

Head of IT, David Conn, was recruited to create an IT environment for Nampak Plastics, as their existing internal IT provision would only be available for a further 12 months due to restructuring within the organisation. Having previously worked in an outsourced IT environment, David knew it would be crucial to pick the right supplier to work with, so engaged an external consultancy to provide a tender process that would ensure a flexible, reliable and cost effective solutions provider would be engaged.

► End-to-End Solution

With 6 IT suppliers bidding for the opportunity, it was Bedford based Blue Chip's ability to offer an end-to-end managed service, with a single point of contact, that stood out. David Conn explained, 'some companies can do Windows, some iSeries, but not many can do both as a fully managed service without sub-contracting. Having a single provider saves time and resource, working with a single point of contact and requiring a single service review.'

Stability through green IT
